

IC2 Product Testing Workgroup Notes

Thursday, January 30, 2025 1-2 pm ET/ 10-11 am PT

Participants (20): Mikalah Bailey, Andre Algazi, Ann Astarita, Antony Williams, Ann Astarita, Stephanie Frisch, Amanda Charette, Kelleigh Wasser, Jennifer Harfmann, Michael Zahn, Hannah McNeight, Nicole Orabona, Jen Jackson, Conor Shea, Mui Koltunov, Justin Waltz, Katie Fellows, Karna Holquist, Sarah Briggs, and Latonya Jackson

Welcomed new workgroup members

AMOS Presentation from Tony Williams: williams.antony@epa.gov

- AMOS pulls together EPA methods into one database. It is not yet public but will likely to go public by Spring 2025.
- The team harvested documents, mapped them to chemistry, and put them into this database. The database contains EPA chemicals, methods, spectra, and fact sheets. For example, under methods there are further categories that include methodology, source, method number, method type, and information.
- So far there are 6862 methods covering 15k substances. Full PDF files on the chemicals. The chemical structures also available. Chemical structures can be searched to show exact and partial matches based on a standard similarity search.
- Users have the ability to search by functional class via a visualization tool.
- *For an in-depth training session with Tony, please let IC2 or Andre know*

Reviewing SharePoint Access

- Mikalah confirmed if the group could access the SharePoint: [IC2 Product Testing Workgroup](#). Please reach out to IC2 if you cannot access it.

Group Meeting Time/Day

- IC2 asked the group if the last Thursday of the month generally works. Will send a doodle poll to standardize monthly meeting days going forward.
